GRC (EXTERNAL AUDITOR) TECHNICAL CHECK REPORT

ISO/IEC 27001 Technical Check Evidence

Selected automated technical checks associated with ISO/IEC 27001:2022 Annex A controls.

Prepared for
GRC (External Auditor)

Report generated at
2026-11-05 10:53:01 UTC

Times shown in
UTC

Framework
ISO/IEC 27001:2022

Snapshot ID
b15a807d-ca84-40be-b6a5-cd36d21e8e74

Record MAC key ID
eda9519df6d932d3

Snapshot collected at
2026-11-05 09:45:04 UTC

Endpoints in scope
246

Produced by LEA Platform

This report was generated from a stored evidence snapshot in **LEA Platform** (gsr-lea.com), built by **GSR-IT** (gsr-it.com). The LEA agent runs the commands defined by each rule on the host, and the LEA server evaluates their output against the rule's expected state. The report lists automated technical check results; it is not an audit opinion, a certification, an attestation or a determination of compliance. Evidence records carry an HMAC-SHA256 record MAC computed by the LEA server with a shared secret key when the snapshot was assembled.

Summary of Technical Check Results

88%

of evaluated host/check evidence records passed (5801 of 6602) in snapshot b15a807d-ca84-40be-b6a5-cd36d21e8e74, collected at 2026-11-05 09:45:04 UTC.

Based on snapshot b15a807d-ca84-40be-b6a5-cd36d21e8e74 collected at 2026-11-05 09:45:04 UTC, containing result observations from 2026-11-01 21:18:05 UTC to 2026-11-05 09:49:25 UTC.

5801 of 6602 evaluated host/check evidence records passed and 801 failed.

68 automated technical check(s) associated with ISO 27001 were evaluated on 246 of 246 in-scope endpoint(s). 68 check(s) are explicitly mapped to 20 specific ISO 27001 requirement(s); 0 check(s) carry only the generic ISO 27001 tag and are not mapped to any requirement. ISO 27001 requirements without an associated check, and organizational, procedural and contractual measures, were not assessed.

Scope limitations

- 2 check(s) are custom or locally modified rules rather than unmodified rule-pack content.
- 98 record(s) were observed more than 24 hours (the snapshot interval) before the snapshot was collected.

These results support control-owner review. They do not determine whole-framework ISO 27001 compliance, and they are not independent audit assurance, a certification or an attestation.

CHECKS EVALUATED	MAPPED REQUIREMENTS	PASSING RECORDS	FAILING RECORDS	ENDPOINTS IN SCOPE

Scope, Method and Limits

PURPOSE

This report lists automated technical check results that LEA associates with ISO 27001, to support control-owner review and audit preparation. It is not an audit opinion, a certification, an attestation or a determination of ISO 27001 compliance.

COVERAGE

68 check(s): 68 mapped to 20 specific requirement(s), 0 with a generic ISO 27001 tag only. Requirements without an associated check, and organizational measures, were not assessed.

METHOD

The LEA agent runs the commands defined by each rule on the host and returns their raw output; the LEA server evaluates the output against the rule's expected state. What a check reads depends on its rule. When a remedy runs, the agent repeats the check's validation afterwards and the result reflects that validation output. The snapshot takes each host's latest result per check, so results were observed at different times, listed per record.

External Auditor Report — Evidence Records and Provenance

The evidence records behind this report, with the time each result was observed, the run that produced it and its record MAC. The records support, but do not replace, the auditor's own testing; they do not by themselves verify ISO 27001 results.

Evidence Integrity

Record MAC algorithm	HMAC-SHA256 with a shared secret key held by this LEA platform (not a public-key signature)
Record MAC key ID	`eda9519df6d932d3 (SHA-256 prefix of the key; identifies the key, is not a signature)`
When the MAC is computed	By the LEA server when the snapshot was assembled (2026-11-05 09:45:04 UTC), not by the agent when results were observed
Signed fields	Host, snapshot time, check/requirement ID, framework, result, observed value, agent version, snapshot ID; from payload v2 also run purpose, observation time and result ID; from v3 also rule ID, rule version, requirement mapping, rule origin and content type
How to verify	An administrator calls `POST /lea/compliance/snapshots/b15a807d-ca84-40be-b6a5-cd36d21e8e74/verify`; the platform recomputes every MAC with its stored key. A third party cannot verify without the key.
Verification result	Record MAC self-check by this LEA platform at 2026-11-05 10:53:01 UTC, using its own key eda9519df6d932d3: 6602 valid, 0 invalid, 0 not checkable, of 6602 record(s). This is not an independent verification.
Trust boundary	Anyone holding the key, including administrators with database access, can recompute or forge MACs. MACs do not prove origin or collection time. The database trigger rejecting UPDATE/DELETE on evidence rows can be bypassed by a database owner or superuser.
Population	Every in-scope endpoint × check pair that had a pass or fail result at snapshot time (4913 observations, 6602 records). 11815 pair(s) without a result are not recorded.

Evidence Register

> This PDF lists the first 1000 of 6602 records. The JSON export holds all records.

CHECK · REQUIREMENT	HOST	RESULT	RESULT OBSERVED AT	RUN · RESULT REF	CONTENT	AGENT	RECORD MAC
Check #880 macOS FileVault Enabled A.10.1.1	design-mbp-05	Check failed	2026-11-01 21:18:06 UTC 3 d 12 h before snapshot, stale	Check run result 1301989	Live Rule pack	2.1.0	f27238a6477ed247 payload v3

Check #1236 Audit Rules Watch Sudoers Changes A.8.15	prod-backup-01	Check passed	2026-11-04 20:28:32 UTC 13 h 16 min before snapshot	Check run result 1774957	Live Rule pack	2.1.0	f24626d062e1db17 payload v3
Check #915 SSH Root Login Disabled A.8.2	prod-backup-01	Check passed	2026-11-04 20:28:30 UTC 13 h 16 min before snapshot	Check run result 1774941	Live Rule pack	2.1.0	e53d6e9fd282d9f0 payload v3
Check #1350 Root Is the Only UID 0 Account A.8.2	prod-backup-01	Check passed	2026-11-04 20:28:32 UTC 13 h 16 min before snapshot	Check run result 1774967	Live Rule pack	2.1.0	696c490b392c78b9 payload v3
Check #899 Sudo Requires Password for Privilege Escalation (No NOPASSWD) A.8.2	prod-backup-01	Check passed	2026-11-04 20:28:30 UTC 13 h 16 min before snapshot	Check run result 1774939	Live Modified pack rule	2.1.0	5a614218e4cfe656 payload v3
Check #990 Bluetooth Stack Not Loaded A.8.20	prod-backup-01	Check passed	2026-11-04 20:28:30 UTC 13 h 16 min before snapshot	Check run result 1774945	Live Rule pack	2.1.0	14227205ae264a72 payload v3
Check #1265 SSH Legacy Algorithms Disabled A.8.24	prod-backup-01	Check passed	2026-11-04 20:28:32 UTC 13 h 16 min before snapshot	Check run result 1774961	Live Rule pack	2.1.0	e2fd964464e892fd payload v3
Check #1085 /etc/passwd Permissions 644 or Stricter A.8.3	prod-backup-01	Check passed	2026-11-04 20:28:31 UTC 13 h 16 min before snapshot	Check run result 1774949	Live Rule pack	2.1.0	62a68d045ec56fa7 payload v3
Check #1517 /etc/shadow Permissions and Ownership Restricted A.8.3	prod-backup-01	Check passed	2026-11-04 20:28:33 UTC 13 h 16 min before snapshot	Check run result 1774969	Live Rule pack	2.1.0	5e19fb8a51a4b047 payload v3
Check #887 SSH Empty Password Logins Rejected A.8.5	prod-backup-01	Check passed	2026-11-04 20:28:30 UTC 13 h 16 min before snapshot	Check run result 1774937	Live Rule pack	2.1.0	622d3445373f9461 payload v3
Check #1195 SSH Maximum Authentication Attempts 4 or Fewer A.8.5	prod-backup-01	Check passed	2026-11-04 20:28:31 UTC 13 h 16 min before snapshot	Check run result 1774951	Live Rule pack	2.1.0	4c4fdb9d9288a89a payload v3
Check #1207 SSH Password Authentication Disabled A.8.5	prod-backup-01	Check passed	2026-11-04 20:28:31 UTC 13 h 16 min before snapshot	Check run result 1774953	Live Rule pack	2.1.0	46137069c86d681f payload v3
Check #957 Kernel Protected Hardlinks Enabled A.8.9	prod-backup-01	Check passed	2026-11-04 20:28:30 UTC 13 h 16 min before snapshot	Check run result 1774943	Live Modified pack rule	2.1.0	34ef27e7c06841ca payload v3
Check #1041 Kernel ASLR Fully Enabled A.8.9	prod-backup-01	Check passed	2026-11-04 20:28:31 UTC 13 h 16 min before snapshot	Check run result 1774947	Live Rule pack	2.1.0	2416ed17f9713091 payload v3

Times in This Report

Report generated at	2026-11-05 10:53:01 UTC — when this document was rendered. Regenerating the report changes only this time.
Snapshot collected at	2026-11-05 09:45:04 UTC — when LEA assembled snapshot b15a807d-ca84-40be-b6a5-cd36d21e8e74 from each host's latest results. Checks did not all run at this instant.
Result observed at	From 2026-11-01 21:18:05 UTC to 2026-11-05 09:49:25 UTC — when the hosts reported the individual results (per record in the evidence tables). Oldest observation: 3 d 12 h before the snapshot.
Staleness policy	Records observed more than 24 hours (the framework's snapshot interval) before the snapshot are flagged: 98 record(s).
Time zone	UTC

How the Score Was Calculated

> **Score** = passing evidence records ÷ all evaluated evidence records × 100, from snapshot b15a807d-ca84-40be-b6a5-cd36d21e8e74 collected at 2026-11-05 09:45:04 UTC.

An evidence record is one host × check × mapped requirement. A record is Check passed when the host's output matched the rule's expected state and Check failed otherwise; a pass does not show that a requirement or control is implemented or effective. A check mapped to several requirements produces one record per requirement for the same observation (4913 host/check observation(s) behind 6602 record(s)). Host/check pairs without a pass or fail result are not recorded and not counted (11815 pair(s), including checks that do not apply to a host's platform). The street light uses fixed thresholds: **green** at 80% or higher, **amber** from 50–79%, and **red** below 50%.

Each evidence record carries an HMAC-SHA256 message authentication code (record MAC) computed by the LEA server with a shared secret key when the snapshot was assembled, not by the agent when the result was observed. A matching MAC shows that the signed fields have not changed since then without the key. Anyone holding the key, including administrators with database access, can recompute or forge MACs, so they are not proof of origin or of collection time, and they cannot be verified by a third party without the key. Record MAC key ID: eda9519df6d932d3 (the first 16 hex characters of the SHA-256 of the key; it identifies the key and is not a signature). The database rejects UPDATE and DELETE on evidence records through a trigger; a database owner or superuser can bypass it. Record MAC self-check by this LEA platform at 2026-11-05 10:53:01 UTC, using its own key eda9519df6d932d3: 6602 valid, 0 invalid, 0 not checkable, of 6602 record(s). This is not an independent verification. Generated by LEA Platform (gsr-lea.com), built by GSR-IT (gsr-it.com).
